

Dungeon Quest RPG Game

Project Title: Dungeon Quest RPG

Project Type: 2D Adventure Role Playing Game

Project Duration: 10 Weeks

Week 1: Project Research & Requirement Analysis

1. Finalize Game Concept and Storyline

Develop the main RPG story, dungeon world, player role, missions, and overall game objectives.

2. Requirement Analysis

Identify required features, gameplay mechanics, tools, and technologies needed for development.

3. Research Similar RPG Games

Analyze existing RPG games to understand character systems, combat, levels, and game design.

Deliverable: Requirement Analysis Document

Week 2: Game Design & Planning

1. Character Design Planning

Design the player character, enemies, abilities, and their roles in the game.

2. Dungeon and Level Design

Create dungeon maps, obstacles, environments, and different difficulty levels.

3. Game Flow Planning

Prepare the complete gameplay structure from starting the adventure to defeating the final boss.

Deliverable: Game Design Document

Week 3: Environment & Basic System Development

1. Game Engine Setup

Configure the development environment and create the initial project structure.

2. Interface Development

Create the main menu, game screen, and basic user interface components.

3. Dungeon Environment Creation

Develop dungeon scenes, backgrounds, and basic game locations.

Deliverable: Basic Game Framework

Week 4: Player Character Development

1. Player Character Implementation

Create the player character with movement controls and required animations.

2. Health and Attack System

Develop player health, damage, and attack features for gameplay.

3. Character Interaction System

Add interaction between the player and the game environment.

Deliverable: Functional Player System

Week 5: Enemy & Combat System Development

1. Enemy Character Development

Create enemy characters with different abilities and behaviors.

2. Enemy AI System

Implement enemy movement, detection, and attack decision-making.

3. Combat Mechanism

Develop the battle system between player and enemies.

Deliverable: Basic Combat System

Week 6: Weapon, Item & Level System

1. Weapon System Development

Implement weapon collection, usage, and upgrade features.

2. Inventory System

Create a system to store and manage collected items.

3. Level Progression System

Add experience points, character improvement, and level progression.

Deliverable: Complete RPG Mechanics

Week 7: Advanced Feature Development

1. Boss Battle System

Create powerful boss enemies with unique skills and challenges.

2. Quest System Development

Add missions, objectives, and rewards for players.

3. Audio and Visual Improvement

Add background music, sound effects, and improve game graphics.

Deliverable: Advanced Game Version

Week 8: Testing & Debugging

1. Gameplay Testing

Test all game features, combat, levels, and player controls.

2. Bug Fixing

Identify errors and improve game stability.

3. Performance Optimization

Improve game speed, loading time, and overall performance.

Deliverable: Beta Version

Week 9: Final Improvement & Documentation

1. Game Enhancement

Improve graphics, interface, and overall user experience.

2. Code Optimization

Organize and improve the project source code structure.

3. Documentation Preparation

Prepare project report, user guide, and presentation materials.

Deliverable: Final Documentation

Week 10: Final Deployment & Presentation

1. Final Testing

Perform complete testing before submission.

2. Project Deployment

Generate the final playable version of the Dungeon Quest RPG.

3. Presentation Preparation

Prepare project demonstration and viva presentation.

Deliverable: Final Dungeon Quest RPG Game
